## **CHEMICAL COMPATIBILITY**

As with all potentially hazardous materials, necessary precautions must be followed to assure the safety of the user. This may include ancillary equipment, personal protective equipment, training and constant monitoring of leak after deployment of unit.

Refer to manufacturers MSDS for complete information regarding handling, clean-up and proper disposal of all hazardous materials.

NAME	CAS#	Seal Time Limit	СОММ	ENTS
Benzene	71-43-2	10 Hours		
Carbon Tetrachloride	56-23-5	10 Hours

<sup>\*</sup>Had little to no effect on the components of the unit.

<sup>\*\*\*</sup> Had severe reaction with unit, holding time greatly reduced, use not recommended. Performance of the RS-2<sup>TM</sup> RuptureSeal<sup>TM</sup> on acid leaks will vary dependent on the type and strength of the acid involved. Generally, acids with a pKa value similar to acetic acid (4.75) (pH 3.4) should be safe to use with the RS-2™ seal. The sealing time capabilities of the unit will be reduced with stronger acids. If it is necessary to increase sealing times beyond the products capability, it is recommended that you have multiple RuptureSeal™ kits on hand and replace as time dictates until the leak can be fully contained.

<sup>\*\*</sup>Had partial effect on the components, reducing units holding time.
